

SAC-M

Automatic Exercise Book Machine

The Advantage Machinery Model SAC-M Semi-Automatic Exercise book machine is manufactured according to the demands of the industry, utilizing start of the art technology. The Machine is equipped with an elevator pile feeder which rises as the operator manually feeds the grouped sheets onto a 2-meter-long conveyor belt. The grouped sheets stop precisely at the stitching station that is equipped with 8 Hohner 52/8 Stitching Heads. The Stitched groups are then transported into the folding section where the group is folded in half. The folded group then goes into the square spine section. The product then gets the front of it trimmed and split into either 3 or 4 finished books. The finished exercise books get delivered on a table.

Model	SAC-M
(1) Pile Feeder / (1) 2 Meter Long Transport Section	
Stitching Section with (8) Hohner Model 52/8 Stching Heads	
Max. Thickness (in)	0.31
